WebEOC Program and Internet/Intranet Web Support

Emergency Management Division
Washington Military Department

Background

The Washington Military Department, Emergency Management Division (EMD) provides WebEOC Crisis Information Management system development and implementation advice, support and training to Washington state, county, and municipal emergency management agencies.

Overview

Using the power of the Internet WebEOC crisis information management software tool puts integrated information management within reach of even the smallest emergency management organization - whether they have an EOC or not. The result is secure, real-time access to details of operations of local, regional and state emergency or disaster activities and with a minimal investment in hardware and software.

From details of resources, community and weather alerts or warnings, shared mapping information, and other data vital to the efficient management of any situation, WebEOC facilitates decision-making in emergency situations through ease-of-use; unlimited user access; and extensive customer tools. Information can be viewed on individual PC's or displayed on one or more large-screen displays. WebEOC displays checklists and reports in conjunction with graphics, maps, video or TV, and other needed information in an emergency. All WebEOC windows are scalable and movable and any number of windows can be displayed on screen.

WebEOC can be hosted, installed locally, or a combination of both (hybrid). The architecture is a standard 3 tier with Microsoft SQL Server 2000 as the database, Microsoft IIS 6.0 as the web server, and clients use Microsoft Internet Explorer Version 5.5 or above.

Web Support

The Webmaster is responsible to provide the Division with Internet and Intranet website development, design, implementation, support and maintenance during normal periods and during emergencies and disasters.

Contact

For additional information, please contact David Rider, IT Applications Manager and Webmaster, at (253) 512-7020, or e-mail d.rider@emd.wa.gov.
